

GS 0444 A US

SPECIFICATION AMENDMENT

Kindly amend specification paragraph 0030 as follows:

1
C

[0030] The valve body member 13 of the pressure control valve ~~14~~ 4 has a control edge 18 that ~~has~~ is so configured on the valve body member 13 that depending on the position of the valve body member 13 in the valve bore 19, a connection from the outlet conduit 3 to the return conduit 5 can be opened, throttled, or closed. The position of the valve body member 13 is established by the pressure of the control medium on the control surface 12, the counteracting spring force of a spring 20 that bears against the valve body member 13, and the working medium pressure of the hydraulic device VB, which is fed via the pressure return conduit 9 to a pressure feedback surface 21 of the valve body member 13.
